Project 2 report

This project is to calculate the probability of winning each game.

The results of this report are calculated through MATLAB

The team played Call of Responsibility 20 times

The team played League of Okay 200 times

The team played Overhear 150 times

The probability of the team winning in Call Of Responsibility is 0.850000

The probability of the team winning in League of Okay is 0.835000

The probability of the team winning in Overhear is 0.526667

Based on the reported number, we can say eSports team is best at Call Of Responsibility with 85% of winning. However, based on the number of times the team played each game, the team is best at League of Okay with 83.5% of winning through 200 matches. I am very confident that the probabilities that I have reported are correct based on data source.
